

NLP v2 Pilot Plan (Movement Phase)

1. Feature Flag

- Add NLP_V2 (default OFF).
- Engine chooses parser v1 or v2 based on the flag.
- No gameplay changes.

2. v2 Parser Scaffold

- New parser module.
- Adapter layer: each intent maps to existing engine actions.
- Keep v2 isolated; legacy untouched.

3. Movement Implementation Rules

- Whole words only (no abbreviations).
- Accepted forms:
 - * {DIRECTION}
 - * {VERB} {DIRECTION}
- VERB set: go, move, travel, walk, run.
- Directions: north, south, east, west, up, down, in, out, enter, exit.

4. Normalization

- Case-insensitive.
- Strip punctuation.
- Remove filler words: the, to, at.
- Simple slot extraction (verb + direction).

5. Tests (Spec)

- Each movement command yields INTENT=MOVE with correct direction.
- v1 behavior unchanged when flag OFF.
- v2 path identical to v1 movement behavior when ON.

6. Acceptance Criteria

- All Movement tests pass.
- v2 produces identical results to v1 on a fixed movement script.
- No other subsystems affected.
