

Phase 2 – Contextual Interaction Features (Planning Draft)

These are the interaction features planned for Phase 2 (after MVP). They depend on spatial logic, object states, or advanced world systems and will be added once rooms, world rules, and puzzle/NPC systems are established.

1. Environmental Block:

- block door with chair
 - block hatch with crate
- Requires object movement + door states.

2. Slide / Move Object Precisely:

- slide cabinet in front of the door
 - slide crate to the wall
- Needs positional rules, directional movement, and spatial awareness.

3. Hide Behind / Under / Inside:

- hide behind wall
 - hide under table
 - hide in locker
- Requires object properties (is_cover, enterable, concealment).

4. Go-To-Room:

- go to bridge
 - go to engineering
- Requires world graph, room lookup, synonyms, and disambiguation.

5. Spatial Prepositions:

- in front of
 - behind
 - next to
 - between
- Needed for advanced environmental commands.

6. Environmental Manipulation Extension:

- lift
 - drag
 - rotate
 - tilt
- Requires object physics rules.

7. Multi-Step Interactions:

- wedge door with pipe
 - brace door with table
- Requires multi-object interactions and persistence.

Notes:

- None of these should be added until world rules, object flags, and spatial logic exist.
- They will become part of a dedicated 'Contextual Interaction Module' later.
